

The electric industry restructuring law, passed in 1997 by the Illinois General Assembly, provides many benefits for all customers. In compliance with this law, electric utilities and suppliers provide an Environmental Disclosure Statement for the 12 months ending every quarter.

The information in this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between April 1, 2011 and March 31, 2012.

In addition to the electricity sources shown on the table and pie chart, ComEd has also procured renewable energy certificates (RECs) each spring since 2008 to fulfill its obligation under the Illinois Renewable Portfolio Standard. A REC represents the beneficial environmental attributes associated with one MWh of renewable generation from resources such as wind, hydroelectric, biomass and solar. This year, ComEd procured a total of 4,072,783 RECs in two separate events, one of which is the Annual procurement and the other that covers multiple years – with deliveries starting in June 2013. Roughly 74 percent of these RECS will be from wind generators or solar photovoltaic panels located primarily in Illinois and adjoining states.

Furthermore, near the end of 2010, a Long-term Renewables procurement event was held, with ComEd procuring a total of 1,261,725 Wind and Solar RECs per year for a 20-year period. Deliveries under these Long-term Renewables contracts are scheduled to start in June 2012.

BUSINESSES REACH LANDMARK IN ENERGY SAVINGS

ComEd and its business customers are enjoying a milestone. Since 2008, area businesses have saved an estimated \$70 million in annual electricity costs through the *Smart Ideas for Your Business*® energy efficiency program. That is the equivalent of removing greenhouse gas emissions from more than 119,000 cars.

PAV YMCA in Berwyn has become the 10,000th ComEd *Smart Ideas for Your Business* success story. The service organization earned an incentive check of more than \$11,000 to help offset the cost of energy efficient improvements to its lighting system. The system provides yearly energy usage savings averaging \$13,000.

“We wouldn’t have been able to complete this project without the *Smart Ideas* program,” said Jamie Kucera, executive director, Pav YMCA.

To date, *Smart Ideas for Your Business* has supported 10,000 projects. For more information, visit **ComEd.com/business-savings/program-incentives**.

Smart Ideas® is funded by ComEd customers in compliance with Illinois Public Act 95-0481.

ENVIRONMENTAL DISCLOSURE INFORMATION

Twelve Months Ending March 31, 2012

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

COMED'S ENVIRONMENTAL DISCLOSURE STATEMENT

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 III Adm. Code 421.

Sources ¹ of Electricity Supplied for the 12 months ending March 31, 2012	Percentage of Total
Biomass power	1%
Coal-fired power	42%
Hydro power	1%
Natural gas-fired power	14%
Nuclear power	39%
Oil-fired power	1%
Solar power	0%
Wind power	1%
Other resources	1%
Unknown resources purchased from other companies	0%
TOTAL	100%

SOURCES OF ELECTRICITY SUPPLIED FOR THE 12 MONTHS ENDING MARCH 31, 2012

AVERAGE AMOUNTS OF EMISSIONS ² and AMOUNT OF NUCLEAR WASTE ³ per 1000 kilowatt-hours (kWh) PRODUCED FROM KNOWN SOURCES for the 12 months ending March 31, 2012	
Carbon dioxide	1039.46 lbs.
Nitrogen oxides	0.96 lbs.
Sulfur dioxide	2.90 lbs.
High level nuclear waste	0.006 lbs
Low level nuclear waste	0.0004 cubic feet

¹ These figures constitute the aggregation of information provided by ComEd's wholesale energy suppliers, most of whom have indicated that their source is the "PJM system mix" and a minor amount from local Landfill gas generators. The PJM system mix is the collective generation produced within the PJM Interconnection, which is the regional transmission organization that maintains the safety, reliability, and security of the transmission system and operates an efficient and effective wholesale electric market in 13 states and the District of Columbia. ComEd's electric service territory is within the PJM footprint.

² The source for the baseline emissions data for the portion of the emissions that are associated with PJM system mix is PJM Environmental Information Services, Inc., (www.pjm-eis.com). For energy that is sourced from the PJM system mix, emissions rates are calculated using the most current emissions data from the Quarterly PJM System Mix by Fuel Reports. These reports exclude the effects of energy imports, exports, external generation and behind-the-meter generation. Those quarterly reports also exclude the effects of any claims on any specific component(s) of the mix.

³ Nuclear Waste rates were calculated based on Generation Net for Sale and quantities of waste at the nuclear stations that were previously owned by ComEd.

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site www.icc.state.il.us.
